

Steps :

- 1) Open a terminal/command line/powershell
- 2) Go to the directory where you put the folder that I shared
- 3) Once you're in the directory (the same as the one in which this text file and the file "streamlit_app.py" is located, type the command "**streamlit run streamlit_app.py**" and then press enter
- 4) This should hopefully open an internet window corresponding to the UI

Possible troubleshoot :

- 1) If some packages aren't installed, this could throw an error. Running **pip install -r requirements.txt**, might solve this problem.
- 2) Pip needs to be installed if it's not, there'll probably be an error as well
